

Qi Zhang

Summary

Full Stack Software Engineer with experience building distributed systems, automation pipelines, and developer productivity tools across logistics and platform domains. Proven track record of improving system throughput, reducing manual operations, and enabling scalable workflows. Experienced in leveraging AI-assisted development (Claude, Copilot) to accelerate prototyping and enhance engineering efficiency in complex debugging and analysis systems. Seeking a full-time full-stack role (H1B transfer available) to architect impactful solutions and drive business value.

Professional Experience

Software Test Engineer | Microsoft(contract) | Redmond, WA | 12/2025 - present

- OS Compatible Platform

- Designed and implemented an automated debugging pipeline for Windows crash dumps, logs, and execution traces using Python(FastAPI) reducing manual triage effort and enabling scalable root cause analysis.
- Built a modular analysis framework to extract stack traces, runtime signals, and metadata, transforming unstructured debugging artifacts into structured, queryable features.
- Automated failure diagnosis workflows including stack pattern matching, module correlation, and failure classification, reducing investigation time and improving debugging consistency across incidents.
- Integrated LLM-assisted reasoning (Claude, Copilot) to generate failure hypotheses and interpret crash patterns, with deterministic rule-based fallbacks to ensure reliability and reproducibility.
- Leveraged AI-assisted development ("vibe coding") to rapidly prototype debugging workflows and iterate on analysis logic, improving development velocity for complex diagnostic tooling.

Software Engineer | Flexport | Bellevue, WA | 10/2021 - 11/2023

- Work Management Platform

- Architected a shipment process template for the forwarding application, establishing best practices that improved development speed for new workflows by ~ 30%.
- Designed an event-driven processing system using Amazon SQS, improving throughput and reducing processing latency by ~ 20%.
- Developed gRPC APIs for inter-service communication, enabling reliable and low-latency messaging across distributed systems.
- Collaborated with operations teams to deliver workflow automation features, reducing manual processing time by ~ 25%.

- Communication Platform & Frontend Systems

- Built the shipment communication platform using Kotlin and React to streamline internal and external messaging workflows.
- Led frontend implementation of a notification settings system for individual and enterprise users using React and GraphQL.
- Delivered UX improvements that increased user satisfaction and simplified user interactions.

Education

Northeastern University

- 01/2019 - 12/2020
- MS in Computer Science
- San Jose, CA

Skills & Abilities

Programming Languages

- C/C++
- Python
- Java
- Scala
- Ruby
- Go
- Kotlin
- HTML
- React

AI

- Cursor
- Copilot
- Claude Code
- OpenAI Codex
- LangChain
- LangGraph

Frameworks & Tools

- Spring Boot
- Ruby on Rails
- React
- Node.js
- ZIO
- gRPC
- GraphQL
- Atlassian Jira API
- FastAPI

Databases & Cloud

- MySQL
- PostgreSQL
- MongoDB
- AWS (S3, Lambda, SQS)
- Redis
