

Qi Zhang

Summary

Software Engineer with experience building distributed systems, automation pipelines, and developer productivity tools and AI driven automation tools. Seeking a full-time Software Engineering role (H1B transfer available) to architect impactful solutions and drive business value.

Professional Experience

Software Engineer | Microsoft(contract) | Redmond, WA | 12/2025 - present

- OS Compatible Platform

- Designed and implemented an automated debugging pipeline for Windows crash dumps, logs, and execution traces using Python(FastAPI) reducing manual triage effort and enabling scalable root cause analysis.
- Built a modular analysis framework to extract stack traces, runtime signals, and metadata, transforming unstructured debugging artifacts into structured, queryable features.
- Automated failure diagnosis workflows including stack pattern matching, module correlation, and failure classification, reducing investigation time and improving debugging consistency across incidents.
- Designed and implemented an AI-agentic orchestration workflow (Python/FastAPI) to automatically interpret unstructured crash patterns and generate failure hypotheses, reducing manual triage time by ~ 50%.

Software Engineer | Flexport | Bellevue, WA | 10/2021 - 11/2023

- Work Management Platform

- Architected a shipment process template for the forwarding application, establishing best practices that improved development speed for new workflows by ~ 30%.
- Designed an event-driven processing system using Amazon SQS, improving throughput and reducing processing latency by ~ 20%.
- Developed gRPC APIs for inter-service communication, enabling reliable and low-latency messaging across distributed systems.
- Collaborated with operations teams to deliver workflow automation features, reducing manual processing time by ~ 25%.
- Automated customs documentation extraction from prior work items, standardizing automation workflows and introducing error handling with proactive alerts, reducing failure rates by ~ 15%.

- Communication Platform

- Built the shipment communication platform using Kotlin and React to streamline internal and external messaging workflows.
- Led frontend implementation of a notification settings system for individual and enterprise users using React and GraphQL.
- Delivered UX improvements that increased user satisfaction and simplified user interactions.
- Mentored and onboarded junior engineers, accelerating their ramp-up time and fostering a culture of continuous learning by leading regular technical brown-bag sessions on distributed systems.

Education

Northeastern University

- 01/2019 - 12/2020
- MS in Computer Science
- San Jose, CA

Skills & Abilities

Programming Languages

- C/C++
- C#
- Python
- Java
- Scala
- Ruby
- Go
- Kotlin
- HTML
- React

AI

- Cursor
- Claude Code
- OpenAI Codex
- LangChain
- LangGraph

Frameworks & Tools

- Spring Boot
- Ruby on Rails
- React
- Node.js
- ZIO
- gRPC
- GraphQL
- Atlassian Jira API
- FastAPI

Databases & Cloud

- MySQL
- PostgreSQL
- MongoDB
- AWS (S3, Lambda, SQS)
- Redis
